

9legacy

The original development team of Plan 9 continued to release fixes, and support for 64-bit architecture. The patches were incorporated into the 9legacy project.

9front

Community-driven continued development of Plan 9, with bug fixes, hardware drivers and major new features, eg virtual machine supervision

2013

2011

Inferno

Put Plan 9's many ideas in a virtual machine runnable on many machines;
Invented Limbo the scripting language

2002

Bell Labs 4th ed of Plan 9
